Multiplace info

Multiplace is the biggest media art festival in V4 region and along with Biennale WRO in Wroclaw, Ars Electronica in Linz and Enter festival in Prague belongs to the main competitions of new media art culture in EU.

Festival aims to EDUCATE the general public (specially children and pensioners) in critical thinking of their presence and future by creative new media events and to CULTIVATE glocal discourse on this topical problem. Multiplace Network 2015 is an ongoing project of collaboration between a number of organizers which since 2002 culminates in a festival organized at around 10 locations in Visegrad region and Europe around the same period in April-May. Different organizers at different cities as Brno-Bratislava-Pécs-Budapest-Torun-Warsaw-Wroclaw-Cracow-Kosice-Prague-Zlin-Zilina-Mons-Vienna-London have become a part of the network in previous years. Multiplace NGO ensures the coordination of the growing network, is responsible for the overall coordination, dramaturgy and international promotion of the festival, as well as for the promotional and financial support of events and traveling projects in different cities co-organized by more partners.

Multiplace network

Multiplace is network of people and organisations interested in interaction between media, technologies, art, culture and society. Network activities culminate every year into the festival, that is happening parallelly at several locations in the world. Its program is open to workshops, installations, discussions, concerts, performances, exhibitions, presentations, screenings and especially new forms of creativity. Original focus on the new media culture has been evolving since 2002 and besides the technological aspect of digital media in art, the focus shifted also to questions related to its aesthetical, social, cultural, legal and political issues. The aim of the festival-network Multiplace is to create the fertile ground for media art, to support the creativity in an open and collaborative environment and to encourage critical reflection on the life in the culture shaped by technologies. Multiplace emphasizes the experimentation with the possibilities of collaboration and networking among particular nodes in the network.

Multiplace Server

The Multiplace NGO also runs the open cultural server Sanchez, which provides online support to the cultural and artistic activities of young authors since 2008. Today it hosts more than hundred websites of artists, online radios, galleries, festivals, cultural initiatives, blogs and human rights advocacy organizations from all over Central Europe.
